Serial Number 9023MGC0013583	Subject Release software V. 1.11.6	

Reason

Release software V. 1.11.6

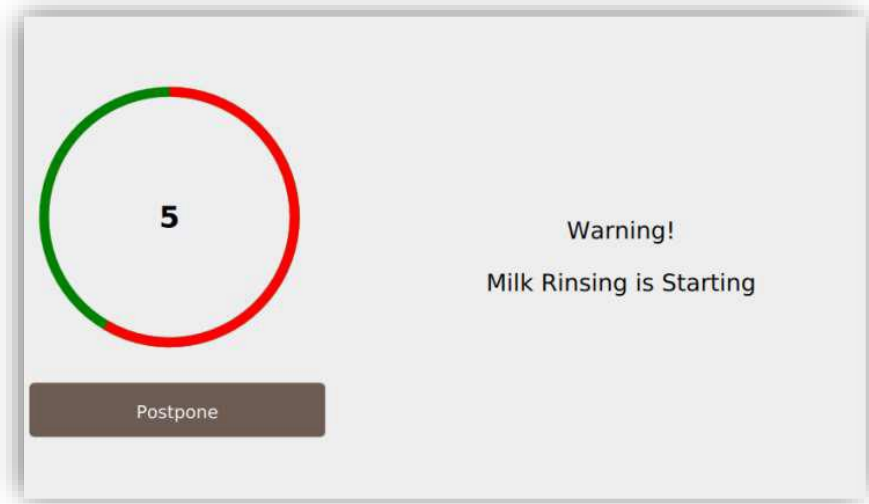

Modifications

We released the software version 1.11.6 with the following implementation:

- Added possibility of postponing rinsing of the milk circuit.

When the machine finishes dispensing a milk-based drink, a 5-minute timer starts, and if no other drink with milk is dispensed in these 5 minutes, the machine automatically rinses the cappuccinatore.

Ten seconds before starting the rinse, the machine shows a pop-up on the display with a countdown, and the «POSTPONE» button, with which the user can postpone the rinse for 5 minutes. A maximum of two postponements are allowed, then the rinsing is carried out.

- Bug-fix related to the pulse count for descaling message
